### Apply the Griffiths III more effectively

Written by world renowned practitioners of the Griffiths Scales of Child Development, Third Edition (Griffiths III), this volume presents individual case studies to assist practitioners and trainees in making full use of the Griffiths III to comprehensively assess a child's development. Practitioners will learn about tracking and monitoring development and how to measure the impact of intervention – creating more informed decisions about the management and placement of the child.

Two introductory chapters examine the Griffiths III as a child development assessment tool, looking in detail at its psychometric properties and how to use the test to interpret, plan, and understand a child's performance as well as the child's strengths and challenges. Grouped

according to five color zones for ease of reading, 15 case studies are presented for children with a wide range of abilities and from 10 different countries. The book is based on four conceptual frameworks: the ICF-CY, ESSENCE, the link between function and intervention, and Ruth Griffith's Avenues of Learning theory. Throughout the examples, the perspective of the child is placed at the center and their voices are included in the plans described. Key concepts, points of importance, and questions for the reader are included at the end of each chapter.

The book is aimed at practitioners of the Griffiths III, but it is also of interest to a wider range of developmental practitioners, including child psychologists, child psychiatrists, pediatricians, and child psychotherapists.

**“This excellent compilation of case studies will be a handy resource for the use of Griffiths III with children with different developmental profiles and for assisting in the interpretation of the results.”**

Soundara Somasundaram, MRCPCH, Associate Specialist in Community Paediatrics, NHS Lothian, Edinburgh, UK

## Griffiths III – A Case Study Book for Practitioners

### Contents

About the Editors  
Foreword  
Preface

#### Section I: Introduction

Chapter 1: An Introduction to the Griffiths III Case Study Book

#### Section II: Griffiths III – A Child Development Assessment Tool

Chapter 2: Understanding the Griffiths III Test Properties to Understand a Child's Performance

Chapter 3: Using Griffiths III to Interpret, Plan, and Report a Child's Needs

#### Section III: Griffiths III Case Studies

Zone 1: Children With Symptoms of Learning, Physical, or Sensing Difficulties

Chapter 4: Divoc: School Readiness in a Child With Developmental Language Disorder

Chapter 5: Mary: Nonstandardized Use of Griffiths III as a Qualitative Assessment of a Child Over 6 Years

Chapter 6: Poppy: A Child With Hearing Impairment and Congenital Cytomegalovirus Infection

Zone 2: Children With Dominant Symptoms of the Autistic Spectrum

Chapter 7: Hugo: A Brazilian Child Diagnosed With Autism Spectrum Disorder

Chapter 8: Jamie: Assessing a Child With High Functioning Autism

Chapter 9: Eli: Assessing a Child With Low Functioning Autism

Chapter 10: Victor: Resilience in the COVID-19 Pandemic

Zone 3: Children With Symptoms of General Developmental Delay

Chapter 11: Johan: A Swedish Boy Who Fits the ESSENCE Description

Chapter 12: Sam: Neurodevelopmental Concerns in a Preterm Infant

Zone 4: Children With Syndromes or Genetic Disorders

Chapter 13: Elena: Assessing a Child With Down Syndrome

Chapter 14: Ben: A Boy With a Mosaic Form of Chromosome 18q21.1 Deletion

Chapter 15: Milly: A Child With Fetal Alcohol Spectrum Disorder

Chapter 16: Ava: A Girl With Phenylketonuria and Typical Development

Zone 5: Children With Variability in Typical Development

Chapter 17: Leo: A Child With Variability Above the Range of Typical Development

Chapter 18: James: A Child With Variability Within the Range of Typical Development

#### Section IV: Best Practice Strategies and Griffiths III

Chapter 19: Griffiths III Best Practice Strategies Emerging From the Cases Presented

Chapter 20: A Final Word

Appendix

### The editors

**Louise Stroud, PhD**, is a registered clinical psychologist and full professor employed in the Department of Psychology of the Faculty of Health Sciences at the Nelson Mandela University in Port Elizabeth, South Africa. She is also the lead researcher for the Association for Research in Infant and Child Development (ARICD, <https://www.aricd.ac.uk/>) based in Manchester, UK. Her specific research interests include the study of the psychology of people and their lives, the development of children, neuropsychology, and ecopsychology.

**Elizabeth Green, MD**, is a retired developmental pediatrician, former consultant in pediatric rehabilitation at Chailey Heritage Clinical Services, former medical director of South Downs Health NHS Trust in Brighton, and past president of ARICD. She currently holds the research chair and is a trustee of ARICD. She is also a trustee of the Chailey Heritage Foundation and research associate at the Psychology Department at the Nelson Mandela University in South Africa.

### A unique look at the scientific psychology of meditation

What is meditation? What do people hope to get from practicing it and what do they really get? How can the effects of meditation be explained? And what are the best approaches to researching the psychology of meditation so we can understand more? This volume provides state-of-the-art answers to these questions. Contrary to commonly accepted wisdom, meditation comes in huge varieties and the reasons why people begin to meditate (and stay with it) are also numerous and diverse. Even mindfulness, which is often (wrongly) used as a synonym for meditation, comes in many forms.

This book first describes the varieties of meditation in detail and then succinctly summarizes the beneficial effects found in the avalanche

of studies available, especially in clinical contexts, and also explores recently emerging topics such as negative effects and the impact of ethics and spirituality. The author expertly provides theories of four main traditional meditation approaches, which has never been done before in this form, and gives a critical overview of Western approaches to explain the effects of meditation. In conclusion, he makes recommendations on how to improve future meditation research.

This book is of interest to meditation researchers, mental health practitioners, students interested in meditation and mindfulness, and to everybody who seriously wants to know more about the topic.

**“Readable, rigorous, and well-researched, this book reveals where the field is at today and lays out a roadmap for the research of tomorrow.”**

Kieran C. R. Fox, PhD, School of Medicine, Stanford University, CA, USA

### The author

**Peter Sedlmeier** is Professor of Psychology at the Chemnitz University of Technology, Germany. He mainly teaches research methods and cognitive psychology. Apart from the psychology of meditation, his current areas of interest include intercultural research, time processing, and computer modeling of cognitive and statistical processes. He has had an ongoing meditation practice for more than 20 years, mostly Zen, interspersed with some extended excursions into the Theravada world, and some experience in Yoga meditation and TM.

### **Practical and scientific guidance on psychological interventions for patients with cancer**

Psychosocial oncology is a health psychology specialty that focuses on the psychological, behavioral, emotional, and social challenges faced by patients with cancer and their loved ones. Cancer can cause significant distress, and psychosocial interventions are known to be effective for helping patients and families navigate the many issues that can arise at any stage of the cancer continuum.

This volume provides psychologists, physicians, social workers, and other health care providers with practical and evidence-based guid-

ance on the delivery of psychological interventions to patients with cancer. The multidisciplinary team of authors succinctly present the key principles, history, and theoretical models of cancer-related distress and explore clinical assessment and interventions in cancer care, in particular psychological and psychiatric treatments, multidisciplinary care management, and supportive interventions. Case vignettes provide clear insights into diagnostic processes and treatment planning, and printable handouts and screening tools are invaluable for practitioners.

**“I strongly recommend this book to both trainees and advanced practitioners who want to have the most recent advances in the field at their fingertips.”**

Matthew Loscalzo, LCSW, APOS Fellow, Executive Director, People & Enterprise Transformation; Emeritus Professor of Supportive Care Medicine and Professor of Population Sciences at City of Hope, CA

### The authors

**Teresa Deshields, PhD, ABPP**, is the Director of Supportive Oncology at Rush University Cancer Center and a professor in the Departments of Medicine, and Psychiatry and Behavioral Sciences at Rush University Medical Center in Chicago. She is a clinical health psychologist, and her clinical practice is devoted to treating cancer patients and their family members, throughout the cancer continuum. Her research is focused on issues related to symptom burden and quality of life in cancer patients and survivors.

**Jonathan Kaplan, MD**, is an assistant professor in the Departments of Psychiatry and Behavioral Sciences and Medicine at Rush University Medical Center. He is the psychiatrist for the Rush University Cancer Center and a consultation-liaison psychiatrist at Rush University Medical Center. He specializes in the psychiatric treatment of medically complex patients including patients with cancer. His research interests include psycho-oncology and collaborative care psychiatry.

**Lauren Z. Rynar, PhD**, is an assistant professor in the Department of Psychiatry and Behavioral Sciences and a clinician in the supportive oncology program at the Rush University Cancer Center. She specializes in the psychological care of cancer patients, survivors, and caregivers. Her research interests include quality of life, coping styles, cancer-related distress, and models of supportive care delivery among cancer patients.

### Expert guidance on how to provide competent gender-affirming care to trans people

This volume provides fundamental and evidence-based information on working with transgender and gender diverse people in mental health settings. It provides background information on the historical context of care with transgender clients, clarifying terminology, and helping the reader understand diverse experiences of gender. The expert authors outline the key qualities of competent practice with trans clients, such as the use of affirming language and providing a safe environment, and strategies for improving inclusivity and

evidence-based care. dickey and Puckett provide insight into current topics, such as the proper use of pronouns, working with youth, suicide and self-injury, and problematic approaches such as conversion therapy and rapid onset gender dysphoria. Practitioners will find the printable resources invaluable for their clinical practice, including sample letters of support for trans clients who are seeking gender-affirming medical care.

**“At some point in their career, virtually every clinician will encounter clients who identify as trans or nonbinary. This book adeptly prepares clinicians for this work in a way that is simultaneously comprehensive and concise. It is a must-read for students and experienced clinicians alike.”**

Michael L. Hendricks, PhD, ABPP, Washington Psychological Center, Washington, DC; lead author on seminal article developing the minority stress model for transgender people.

### A new edition with the latest approaches to assessment and treatment of suicidal behavior

With more than 800,000 deaths worldwide each year, suicide is one of the leading causes of death. The second edition of this volume incorporates the latest research, showing which empirically supported approaches to assessment, management, and treatment really help those at risk. Updates include comprehensively updated epidemiological data, the role opioid use problems, personality disorders, and trauma play in suicide, new models explaining the development of suicidal ideation, and the zero suicide model. This book aims to increase clinicians' access to empirically supported interventions for suicidal behavior, with the hope that these methods will become the standard in clinical practice.

The book is invaluable as a compact how-to reference for clinicians in their daily work and as an educational resource for students and for practice-oriented continuing education. It's reader-friendly structure makes liberal use of tables, boxed clinical examples, and clinical vignettes. The book, which also addresses common obstacles in treating individuals at risk for suicide, is an essential resource for anyone working with this high-risk population.

**“The complexity of the challenge that suicide presents is matched only by the clarity of Dr. McKeon’s guidance. This is a truly invaluable resource.”**

Michael Hogan, PhD, Former Chairman, President’s New Freedom Commission on Mental Health

### About the author

**Richard McKeon, PhD, MPH**, received his doctorate in clinical psychology from the University of Arizona, and a master of public health in health administration from Columbia University. He has spent most of his career working in community mental health, including 11 years as director of a psychiatric emergency service and 4 years as associate administrator/clinical director of a hospital-based community mental health center in Newton, New Jersey. He established the first evidenced-based treatment program for chronically suicidal borderline patients in the state of New Jersey utilizing Marsha Linehan's Dialectical Behavior Therapy. In 2001, he was awarded an American Psychological Association Congressional Fellowship and worked for

US Senator Paul Wellstone, covering health and mental health policy issues. He spent 5 years on the Board of the American Association of Suicidology as Clinical Division Director and has also served on the Board of the Division of Clinical Psychology of the American Psychological Association. He is currently Chief of the Suicide Prevention Branch for the Substance Abuse and Mental Health Services Administration in the US Department of Health and Human Services. He also serves as Co-Chair of the Federal Working Group on Suicide Prevention and participated in the development of the World Suicide Report for the World Health Organization.

### A thoughtful look at the history of psychological assessment

While there have been significant developments in the technical aspects of assessing mental functioning, there is still much to be debated about the motivations and meanings of measuring the mind. How can mental faculties be objectified and what influence does subjectivity have on the object being measured and the mind measuring it? What are the consequences of quantifying complex and interdependent functions and scaling these measurements for psychometric instruments?

The contributors of this edited volume explore these questions by adopting a historical and epistemological approach to consider how

psychometric assessment was born and developed within the affirmation of psychology as an empirical science. Chapters explore the birth of the scientific approach, as well as different assessment methods of cognitive abilities and personality traits, and the development of new technologies that support psychological evaluation and its applications in educational and rehabilitative fields.

This book is of interest to researchers of human behavior as well as practicing psychologists and psychiatrists who want to deepen their understanding of the historical and epistemological roots of psychological assessment.

## How to Measure Mind

A Historical and Epistemological Approach to Psychological Assessment

### Contents (preliminary)

#### Preface

#### 1 Examining the Subject-Object Relation in the Foundation of Scientific Psychology

*Maria Sinatra*

Introduction

The First Steps Toward the Objectification of the Psychological Subject

The *Error* as the Landmark of the Measured Mind  
How to Measure the Mind: The Objectification of Mental Processes

Helmoltzian Sensory Psychology and the Subject-Object Relationship

Can the Subject Be Investigated Subjectively? From Brentano to Fechner via Donders

Conclusion

#### 2 The Development of Applied Psychology and Psychotechnics in Germany: The Contributions of Walther Moede

*Horst Gundlach*

Introduction

The Development of Psychotechnics: Walther Moede  
Moede from Experimental to Applied Psychologist:  
The Role of Psychotechnics

Psychometric Tests for Drivers

From Educational to Industrial Psychology

Critical Issues Within Psychotechnics

Moede's International Contacts Within Psychotechnics

Moede's Role in the History of Psychotechnics (and Psychology)

#### 3 Wundtian Objects: The Paradigm of Self-Observation

*Luigi Traetta*

Introduction

Psychology as Viewed by Positivists

Early Efforts at Methodologizing Psychology

Why Quantify Mental Events

Psychological Objects

Reality as Subject *and* Object

#### 4 Psychometrics: From the Past to the Present

*Santo Di Nuovo*

The Early "Reactive" Psychological Instruments

Attempts to Measure Intelligence: From Mental Age to IQ, Including Criticisms

Testing in the United States: Enthusiasms and Debates

Measuring Intelligence Drives Us to Think About Intelligence.

The Sense of Measuring

Beyond the Limits of "Objective" Psychometrics:  
Qualitative and Dynamic Assessment

The "Criterial" Tests

"Objective" Measurement of Personality: The Inventories

The (So-Called) "Projective" Tests

An Attempt at Synthesis: Is a Test an "Objective" Evaluation Tool?

#### 5 In-Depth Interviews: Self-Observation and the Emergence of Psychic Reality in Morphological Psychology

*Herbert Fitzek*

Subjectivity and Objectivity, Qualitative and Quantitative

Self-Observation: Restriction or Extension of the Perspective on the Psyche?

Artificial Conditions for the Reconstruction of Meaning Connections

The Use of Self-Observation in Morphological Psychology

The Morphological In-Depth Interview

Concrete Forms of Self-Observation in Morphological Investigations

#### 6 The New Frontiers of Psychometrics: From Computerized Adaptive Testing to the Use of Artificial Agents and E-Assessment

*Alessandro Di Nuovo and Daniela Conti*

The Introduction of Computerization in Diagnosis:  
Advantages and Limitations

"Adaptive" Testing

Can Robotics Help With Psychometric Testing?

Electronic Testing: Lessons From the Pandemic

#### 7 From Subject to Object and Vice Versa: Activities of and in E-Learning

*Pierpaolo Limone*

Introduction

The Theoretical Background

Educational Online Activities: Reshaping the Subject-Object Relationship

Evaluation and Assessment Within E-Learning Activities

### The editors

**Santo Di Nuovo, PhD**, Professor Emeritus of Psychology at the University of Catania, Italy, where he was Dean of the Department of Education. President of the Italian Association of Psychology. His research activity focuses on methodology and psychometrics applied to different areas of psychology: cognitive, personality, normal and pathological, legal, clinical, and rehabilitation.

**Maria Sinatra, PhD**, Professor of Psychology at the University of Bari and at the Institute of Design of Matera, Italy. She has been president of Second Level Degrees, of the Discipline Board, and a Rector's Delegate for Counselling. Her research interests are the historical reconstruction of psychology as well as the psychological aspects of mass-media communication and new addictions.

### A concise guide to understanding, assessing, and addressing bullying

There has been an explosion of media attention on youth bullying and peer victimization over the last decade, with cyberbullying becoming more prevalent through the use of social media. While any bullying has serious negative physical and mental health effects which can lead the bullied individual to great despair and even suicide, there are also negative outcomes for the bullies themselves. This volume provides clinicians with clear guidance on how to assess and treat this complex behavior.

In this evidence-based guide, practitioners learn about bullying, its prevalence, how cyberbullying differs from in-person bullying, what models are available for understanding how bullying occurs, and the best tools and approaches for assessment of these behaviors. The reader is guided through the most effective school-based prevention programs that aim to reduce bullying, and a clinical vignette gives hands-on insight into how a bullying case in a school is managed. Additional resources are provided in an appendix. This book is ideal for educational psychologists, child psychologists, and anyone working with children and adolescents who is committed to helping those being bullied.

### The authors

**Amie E. Grills, PhD**, is a professor at Boston University's Wheelock College of Education & Human Development. She is a licensed clinical psychologist and researcher whose work has examined the roles of peer (e.g., bullying), familial (e.g., parental stress), and academic (e.g., achievement) variables on the development of youth internalizing difficulties. She also conducts research on risk and resiliency factors among individuals exposed to traumatic events.

**Melissa Holt, PhD**, is an associate professor at Boston University's Wheelock College of Education & Human Development, and a licensed psychologist. Dr. Holt's research focuses on adolescents' experiences with victimization and identity-based harassment. She has evaluated the overlap among violence exposures, factors that promote resilience among youth exposed to violence, disparities in victimization and its correlates, and the efficacy of school-based prevention programs.

**Gerald Reid, PhD**, is a licensed psychologist in private practice in Boston, MA, as well as a part-time faculty member at Boston University's Wheelock College of Education. Dr. Reid has conducted research on the topic of bullying in schools. In his practice, Dr. Reid treats patients who have undergone mental health challenges related to interpersonal stressors, such as bullying.

**Chelsey Bowman, PhD**, is a post-doctoral psychology fellow at Children's National Hospital in Washington, DC. Dr. Bowman's research interests include understanding the impact of a range of victimization forms, including bullying, on the health and well-being of youth and college students. Clinically, Dr. Bowman provides evidence-based treatments to youth and their families for chronic and acute medical and psychiatric conditions.

### Learn about the role of dark personality in the workplace

This collection of contributions by international experts in the field provides an update on dark personality in the workplace, covering several different aspects including narcissism, power motives, and leadership outcomes of dark personality. Data were collected in different countries, using different methodological approaches.

The volume comprises current reviews of dark personality and narcissism in the workplace, explores innovative methodological ap-

proaches to measuring dark personality, looks at how to deal with dark leadership as well as presenting several empirical contributions on the relationships between dark triad personality traits and states, power motives, motivation to lead, and abusive supervision. This is essential reading for personality researchers, occupational psychologists, and anyone interested in the Dark Triad and other dark personality traits.
