### Practical tools for putting people at the center of mental health care

Person-centered mental health care is essential for keeping service users at the center of care. This handbook uses practical examples across health care, research, education, and leadership to illustrate how to implement person-centered approaches for and with the growing population of service users who have mental health challenges. Looking at the different service user encounters enables service providers to envision the effective, comprehensive implementation of person-centered care.

Each chapter follows a concrete example exploring different techniques, tools, and resources that can be used with service users who

have mental health challenges. An appendix provides the handouts in online, printable form. Written by experts in person-centered care who have diverse experiences with mental health-related practices, policies, research, and education, this comprehensive handbook is a valuable resource for psychiatrists and other mental health practitioners, researchers, educators, and policy makers who work with people who have mental health challenges as well as for service users and their families.

“This is a ground-breaking volume that goes beyond the standard set of well-accepted principles for person-centered mental health care to (finally) operationalizing these principles in terms of concrete practice.”

Larry Davidson, PhD, Professor of Psychiatry and Director of the Program for Recovery and Community Health of the Yale University School of Medicine, New Haven, CT

### A highly practical book for all mental health professionals wanting to know how to apply positive psychiatry in their daily work!

Positive psychiatry is the science and practice of psychiatry and clinical psychology that seeks to understand and promote wellbeing among people who have or are at high risk of developing mental health problems. In this new approach, the person takes center stage, not the disease, and the focus is not only on repairing the worst, but also on creating the best in our patients.

The authors from the fields of medicine and clinical psychology present over 40 applications and many cases and stories to illustrate the four pillars of positive psychiatry: positive psychology, solution-focused brief therapy, the recovery-oriented approach, and nonspecific factors.

The book shows how mental health professionals can significantly increase patient collaboration to co-create preferred outcomes through discovering possibilities and competencies and through building hope, optimism, and gratitude.

Essential reading for psychiatrists, clinical psychologists, other professionals working in the field of mental health care as well as students who want to take a positive focus to make psychiatry faster, lighter, and yes, more fun. We have high hopes that positive psychiatry will become a firm part of the psychiatry of the future.

“This book defines a critical time point in the evolution of psychiatry.”

Dilip V. Jeste, MD, Past President of the American Psychiatric Association, and Varsha D. Badal, PhD, University of California San Diego

## The Authors

**Fredrike Bannink, PhD**, is a clinical psychologist, child psychologist, and lawyer. She is a trainer and supervisor of the Dutch Association for Behavioural and Cognitive Therapy (VGCT) and cofounder and chair of the Positive CBT section. She is also founder and chair of the Special Interest Group Positive CBT of the European Association for Behavioural and Cognitive Therapies (EABCT). Fredrike has a therapy, training, coaching and mediation practice based in Amsterdam, the Netherlands. She is a pioneer in recognizing and describing the possibilities of working with a positive focus in many different fields, such as (mental) healthcare, education, and law. She is an international keynote speaker, trainer, and author of around 50 books.

**Frenk Peeters, MD**, is a psychiatrist and psychotherapist. He is Professor of Clinical Psychology at the Department of Clinical Psychological Science, Faculty of Psychology and Neuroscience, Maastricht University, Maastricht, The Netherlands. Frenk is specifically interested in improving and renewing treatments for mood disorders; his practice utilizes both the problem-focused as well as the solution-focused approach. He has (co-)authored more than 150 peer-reviewed papers and book chapters, mostly in the field of mood disorders.

### **Forensic evidence is often not as clear cut as many think - find out why and how psychology plays a vital role.**

This volume addresses challenges in the evaluation and application of forensic evidence in criminal proceedings. It aims to shed light on the role and the corruptive influences of different types of evidence and their interplay in criminal proceedings. Research reported here shows that collection and interpretation of forensic evidence are susceptible to contextual influences and biases; that not all types of forensic evidence are equal in terms of reliability and accuracy;

and moreover, that courts often overvalue the quality of evidence. It highlights the need for maximizing safeguards and the importance of proper training among forensic experts and legal practitioners. This can best be accomplished when representatives from different disciplines and professions, law and psychology, research and practice, form allegiances.

**The new updated edition of this invaluable manual for assessing and documenting functioning, disability, and health according to the WHO ICF**

WHO's International Classification of Functioning, Disability and Health (ICF) is the internationally accepted standard for assessing, documenting, and reporting functioning and disability. The ICF Core Sets highlighted in this second edition of the book have been developed to facilitate the standardized use of the ICF in real-life clinical practice. Consequently, they can guide clinical quality management efforts. This edition has been updated to reflect developments in the ICF Core Sets, including updated information on eight new Core Sets and the Generic Sets, the new ICD-11 codes, more details on the Core Set development process, and a new section on ICF-based tools. This manual:

- Introduces the concepts of functioning and the biopsychosocial model of the ICF

- Describes how and why the ICF Core Sets have been developed
- Explains step-by-step an approach for applying the ICF Core Sets in clinical practice
- Provides practical tips for clinicians to apply the easy-to-use, comprehensive documentation form
- Includes case examples illustrating the assessment of people with different health conditions and in different healthcare contexts

This manual is inherently multi-professional and will be of benefit not only for practitioners working in various healthcare contexts but also for students and teachers.

### The Editors

**Jerome Bickenbach, PhD, LLB**, is a member of the steering committee of the ICF Research Branch, was closely involved in the development of the ICF at the WHO, and is a member of the Functioning and Disability Reference Group (FDRG) at WHO.

**Alarcos Cieza, Psychologist, PhD, MPH**, is a member of the steering committee of the ICF Research Branch. She has led the development process of several ICF Core Sets since 2001. She also led the development of the ICF e-learning tool at WHO and participated in the development of other training materials and of the ICF Core Set documentation tools.

**Melissa Selb, MSc**, is Coordinator of the ICF Research Branch and a Project Scientist at Swiss Paraplegic Research focusing on ICF and functioning-related topics.

**Gerold Stucki, MD, MS**, is Professor and Chair of the Department of Health Sciences and Health Policy at the University of Lucerne, Director of Swiss Paraplegic Research (SPF), and Director of the ICF Research Branch. He is Co-Chair of FDRG, and President of the International Society of Physical and Rehabilitation Medicine (ISPRM).

### Contribute to suicide prevention by using appropriate research methods!

This is a one-stop book for anyone who wants an overview of the research approaches and issues concerning suicide. Leading researchers provide a comprehensive toolbox of the current best practices in suicide research, showing you how to conduct high-quality research using quantitative, qualitative, and mixed-methods in suicide prevention from a public health perspective. Other aspects that are crucial to effective suicide research are also presented, including the proper use of epidemiological measures and study designs, definitional issues, historical background, and ethical aspects.

The clearly written chapters include both theoretical and practical information along with specific examples from different areas of suicide research and prevention, and also explore essential topics such as psychological autopsies, health economics, and technological advances. This volume is ideal for researchers, students, and academics interested in suicide research, as well as policy makers, clinicians, and other practitioners.

by Cristian Leorin, Eloisa Stella, and Diego De Leo

### The Editors

**Kairi Kõlves, PhD**, is Principal Research Fellow/Associate Professor at the Australian Institute for Suicide Research and Prevention (AISRAP), and Co-Director of the WHO Collaborating Centre for Research and Training in Suicide Prevention at Griffith University in Brisbane, Australia.

**Merike Sisask, PhD**, is Professor of Social Health Care at Tallinn University, School of Governance, Law and Society (SOGOLAS), and board member of the Estonian-Swedish Mental Health and Suicidology Institute (ERSI) in Tallinn.

**Peeter Värnik, PhD**, is board member of the Estonian-Swedish Mental Health and Suicidology Institute (ERSI) in Tallinn.

**Airi Värnik, PhD**, is Professor of Mental Health, School of Natural Sciences and Health, Tallinn University, and founder, board member, and principal investigator at the Estonian-Swedish Mental Health and Suicidology Institute (ERSI) in Tallinn.

**Diego De Leo, MD, PhD**, Doctor of Science and Emeritus Professor of Psychiatry, Griffith University, Australia, is the Head of the Slovene Centre for Suicide Research (UP IAM), a world-leading researcher in suicide research and prevention over several decades. He has designed and advised suicide prevention activities, projects, and programs around the world, including his contribution to the World Health Organization.

### Learn about new methods for investigating metamemory and read about the latest developments in the field

Metamemory is ubiquitous in everyday life: We are confronted with what we know about our own learning and memory processes and how we assess and regulate these processes on a daily basis. The research collated here explores new methods for the study of metamemory (computational neuroimaging, verbal reports as data, and time-based measures) and addresses current and emerging research questions that advance our understanding of the basis, validity, and consequences of metamemory. It indicates links between

metamemory and other related concepts, suggests how different perspectives on metamemory may be integrated, and identifies gaps in our knowledge about memory that deserve attention in future research. These new directions are made possible through the knowledge gained from diverse disciplines, including cognitive psychology, developmental psychology, educational psychology, and neuroscience.

# Advance Book Information

Monika Undorf / Vered Halamish (Editors)

## New Directions in Metamemory Research

Zeitschrift für Psychologie, Vol. 228/4

### Table of Contents (preliminary)

#### Editorial

New Directions in Metamemory Research. Methods and Research Questions.

*Monika Undorf and Vered Halamish*

#### Review Article

Toward a Neurocognitive Understanding of the Algorithms That Underlie Metamemory Judgments

*Timothy Kelley, Michael J. Serra, and Tyler Davis*

#### Original Articles

Time-Based Measures of Monitoring in Association With Executive Functions in Kindergarten Children

*Sonja Kälin and Claudia M. Roebers*

Experience Matters. Effects of (In)Congruent Prompts About Word Frequency on Judgments of Learning

*Pedro S. Mendes, Karlos Luna, and Pedro B. Albuquerque*

Learning From (Test) Experience. Testing Without Feedback Promotes Metacognitive Sensitivity to Near-Perfect Recognition Memory

*Evan E. Mitton and Chris M. Fiacconi*

Reactivity of Judgments of Learning in a Levels-of-Processing Paradigm

*Eylul Tekin and Henry L. Roediger III*

#### Research Spotlights

The Language of Recollection in Support of Recognition Memory Decisions

*Ian G. Dobbins and Justin Kantner*

Louder=Larger=Clearer. Examining the Consistency of Metamemory Illusions.

*Beatrice G. Kuhlmann, David J. Frank, and Daniel Danner*

#### Opinion

Responsible Remembering. How Metacognition Impacts Adaptive Selective Memory.

*Dillon H. Murphy and Alan D. Castel*

Do Learners Spontaneously Monitor Their Memory? The Gap Between Educational-Developmental and Cognitive-Experimental Research.

*Vered Halamish and Monika Undorf*
