

Dedicated to delivering the best in psychometric assessments

At Hogrefe, we offer a diverse range of measures for use across the lifespan and for a wide variety of purposes: psychologists, pediatricians, speech and language therapists, healthcare professionals and other related professionals can all benefit from our clinical assessment portfolio.

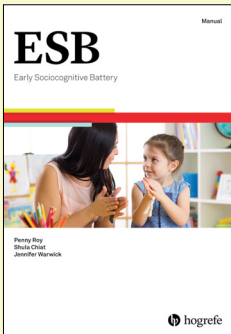

This year we are excited to be announcing the **Intelligence and Development Scales - 2nd Edition (IDS-2)**, the second edition of the highly successful German IDS, first published in 2009. The IDS-2 is a global cognitive assessment of the 'whole child', unparalleled in its ability to identify their knowledge, strengths, and developmental needs in one complete picture.

With 30 subtests covering six domains across Intelligence, General Development, and Executive Functions, the IDS-2 offers the most comprehensive diagnostic assessment available.

The IDS-2 can be used by educational psychologists and other qualified professionals for diverse applications, including identifying and diagnosing intellectual disabilities and learning disorders.

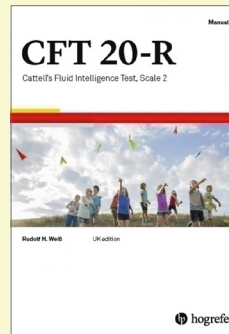

Already available in German, Dutch, Italian, Polish, and U.K. English, international adaptations are also underway in Brazil, Denmark, Finland, France, Norway, Sweden, Spain, and the U.S.

Hogrefe is the leading provider of scientifically-sound assessments, books and journals for learning and teaching about psychology, psychiatry, and mental health in Europe. With offices in 16 countries we are represented by more than 400 employees, and our products are used by psychologists and teachers in schools and universities and by human resources management for selection and development. Our assessments are available in multiple languages, with most of our books and scientific journals published in both German and English. Below are some of our most popular psychometrics for use with children and adults in pediatric, psychological, and educational contexts.

Early Sociocognitive Battery (ESB)

The ESB is a new, innovative assessment for children aged 2–5 years that is predictive of later language and social communication difficulties, including autism spectrum disorder.

Cattell's Fluid Intelligence Test, Scale 2 (CFT-20-R)

The CFT 20-R is a test of non-verbal ability for use with children and adolescents aged from 8 years and six months to 17 years, and is available in U.K. English as well as Czech, Dutch, Danish, German, Italian, Norwegian, Spanish, and Swedish.

Integrative Child Temperament Inventory (ICTI)

Now available with online administration and scoring via the Hogrefe Testsystem, the ICTI is the first standardized measure of child temperament for use in applied settings.

Griffiths Scales of Child Development, Third Edition (Griffiths III)

Described as the 'gold standard' in child development testing, the Griffiths III is a comprehensive, child-friendly assessment for continuous use from birth to 6 years. The Griffiths III is used across the globe in research and practice, and is also available in Italian, Portuguese, and Swedish.

Emotional Processing Scale (EPS)

The EPS is a questionnaire made up of 25-items designed to identify emotional processing styles and potential deficits. For use by professionals working in mental health, psychological therapy, and health psychology.
