A practical roadmap to navigate the new ICD-11 classification of personality disorders

This insightful book offers professionals a comprehensive guide for navigating the new way of diagnosing and understanding personality difficulties and disorders introduced in the ICD-11. Through in-depth clinical examples, these experienced authors illustrate clearly how to determine severity, specify the five trait domains, and interpret aspects of personality dysfunction, including specific combinations of trait domains. The book also provides guidelines for differential diagnosis in relation to a range of other persistent mental disorders, clinical

decision-making, individualized treatment planning, necessary treatment intensity, and psychotherapeutic focus. Readers will appreciate the exploration of available standardized instruments for classification, as well as the guide using the old classifications in the ICD-10 and the DSM-5 with the ICD-11 guidelines in the appendix. This book provides a roadmap for psychologists, psychiatrists, other mental health professionals, and students to use the latest advancements in classification to enhance patient care of people with personality disorders.

“In this brilliant, persuasive, scholarly, and clinically focused work, the authors consider new perspectives on diagnosing personality disorders and superbly illustrate how to use contemporary ways of thinking in assessment and treatment.”

Anthony Bateman, FRCPsych, Visiting Professor, University College London, UK

Bo Bach / Sebastian Simonsen

ICD-11 Personality Disorders

A Clinician's Guide

Contents

Foreword

Chapter 1. Background

The Purpose of This Book
Brief Introduction to ICD-11 Personality Disorder
The Creation of a New Classification
Leaving the Traditional Categories
Focus on Clinical Utility

Chapter 2. General Diagnostic Practice

Crash Course in the Clinical Use of Personality Functioning and Trait Domains
General Diagnostic Requirements
Differential Diagnosis
Manifestations and Development From Childhood to Old Age
Personality Disorder and Other Co-Occurring Mental Disorders
Dimensions Are Coded as Categories

Chapter 3. Clinical Understanding of Personality Functioning

Capacities of the Self
Interpersonal Capacities
Emotional Manifestations
Cognitive Manifestations
Behavioural Manifestations
Psychosocial Impairment and Distress

Chapter 4. Severity Classification

Personality Difficulty
Mild Personality Disorder
Moderate Personality Disorder
Severe Personality Disorder

Chapter 5. Trait Domains

Negative Affectivity
Detachment
Dissociality
Disinhibition
Anankastia
Borderline Pattern Specifier

Chapter 6. Clinical Decision-Making and Treatment

Severity and Clinical Decisions
The Importance of Trait Domains for Treatment
Clinical Interpretation of Combined Trait Domains

Appendix A: Assessment

Severity Assessment
Assessment of Trait Domains

Appendix B: Translation From Traditional ICD-10 Types

Severity and Traditional Types
Trait Domains and Traditional Types
Avoidant Personality Disorder
Narcissistic Personality Disorder

The authors

Bo Bach, PhD, DMSc, is clinical professor at Copenhagen University Hospital in Slagelse, where he works as clinician and director of the Center for Personality Disorder Research. Bach was granted the 2021 Theodore Millon Award by the American Psychological Association for his mid-career contribution to the assessment of personality disorders. He is co-author of the *Diagnostic Interview for Personality Pathology in ICD-11 (DIPP-11)* and the *Personality Disorder Severity for ICD-11 (PDS-ICD-11) scale*. He served as a consultant for WHO on the development of the ICD-11 classification of personality disorders and associated field trials. He is a former board member of the European Society for the Study of Personality Disorders (ESSPD) and serves on the editorial board for *Personality Disorders: Theory, Research, and Treatment* and *Journal of Personality Assessment*. Bach is an internationally certified trainer and supervisor in schema therapy.

Sebastian Simonsen, PhD, is scientific director and clinical practitioner at Stolpegaard Psychotherapy Centre, Mental Health Services in Copenhagen. He is also an affiliated associate professor at the University of Copenhagen. As a scientist-practitioner, Simonsen is specialized in personality disorders with a particular focus on clinical management, treatment planning, psychotherapy, psychopathology, mentalization, social cognition, and interpersonal avoidance. He was part of the work group behind the Danish national guidelines for borderline personality disorder and has published a review paper on European guidelines. Internationally, he has contributed to the dissemination of new dimensional models of personality disorders as well as mentalization-based therapy (MBT). He is also a former board member of the European Society for the Study of Personality Disorders (ESSPD) and serves on the editorial board for *Journal of Clinical Psychology*. Simonsen is an internationally certified trainer and supervisor in MBT.

Improve the future of aviation safety with this essential resource

The field of aviation neuropsychology helps us to understand and improve human performance and safety in the aerospace industry, both for the estimated 300,000+ commercial pilots and the 4.5 billion passengers they transport every year. This handbook brings together a group of internationally renowned academic and industry experts to provide a comprehensive overview of the background, goals, principles, challenges, and associated practice skills and research themes of aviation neuropsychology.

After an introduction to the history and development of aviation psychology, additional sections focus on the importance of prevention and resilience to enhance airline workers' cognitive and mental functioning to reduce the risk of human errors and accidents as well as the different aspects of assessment, including pilot medical certification,

neuropsychological testing, and cultural considerations. Additional chapters explore how we can learn from past errors and build on existing strengths. Finally, special aspects are examined, including the role of different common conditions (e.g., neurological and psychological disorders) and report writing in aviation. Readers will find the book full of unique insights, theory, and research, giving them a comprehensive overview of the field.

While the book is designed primarily for health care professionals, neuropsychologists, clinical psychologists, aviation psychologists, aviation medical examiners, neurologists, and flight safety specialists, it will be of interest to other professionals inside and outside of aviation, including professionals in other safety critical settings or researchers looking to improve safety in the aviation industry.

“This groundbreaking handbook introduces aviation neuropsychology as a new sub-specialty within aviation psychology, offering profound insights into human behavior in aerospace environments and making a significant contribution to advancing flight safety.”

Gunnar Steinhardt, President of the European Association for Aviation Psychology (EAAP)

New Releases in 2024

Handbook of Aviation Neuropsychology

A Practical Guide for the Clinician

Contents

Foreword by Susan E. Northrup

Introduction

Section I: The History and Development of Aviation Psychology

Chapter 1 Practicing Aviation Neuropsychology in a Civilian Regulatory Environment
Randy J. Georgemiller

Chapter 2 A History of the Techniques, Methodologies, and Practices of Neuropsychology for Operational Support in Airline Operations and Air Traffic Management
Lea Sophie Vink

Chapter 3 Neurological Conditions and Their Implications for Crew Licensing and Safety
David G. Newman

Chapter 4 Neuropsychology's Role in Personnel Selection
Raymond E. King and Thomas R. Carretta

Chapter 5 Principles and Practices in Military Aeromedical (Neuro)psychology
Ryan Green and Forest Pavel

Chapter 6 The Role of the Psychiatrist in Neurocognitive and Mental Health Assessments in Aviators
Asha Pook and Raymond Padua

Chapter 7 Aerospace Neuropsychological Modeling of Pilot Resources
Thomas A. Van Dillen, Robert L. Kane, Anthony P. Tvaryanas, Hunter T. Klevgard, Tammy T. Ho, Kelene A. Fercho, Brett S. Torrence, and Sarah V. Ligda

Section II: Prevention and Resilience

Chapter 8 Salutogenic Approach to Mental Health and Well-Being in Aviation
Sanjiv Sharma, Laurie Shaw, and Anthony Carter

Chapter 9 Vulnerability and Protective Factors in Pilot Mental Health and Well-Being
Corrie Anna Ackland and Brett Robert Charles Molesworth

Chapter 10 The Clinical Utility of Structured Cognitive Training in Pilots
John Milanovich

Chapter 11 Substance Use Disorders in Aviation
Quay Snyder

Section III: Assessment

Chapter 12 The Role of Cognitive Screening for Pilot Medical Certification
Kelene A. Fercho

Chapter 13 The Cognitive Challenges of Aviation: Exploring the Demands on Pilots and Air Traffic Controllers
Nadine Belser and Viktor Oubaid

Chapter 14 The Challenges of Defining the Aeromedical Significance of Neuropsychological Test Results
Robert L. Kane, Kelene A. Fercho, Jerry Crutchfield, Carlos Porges, and Thomas A. Van Dillen

Chapter 15 Assessing Cognition for Aviation: Findings From a Systematic Review of Neuropsychological Tests Used to Assess Pilots
Eilis Boudreau and Annette M. Totten

Chapter 16 Toward a Systematized Interpretation for the Pilot Neuropsychological Examination
Michael Chafetz

Chapter 17 Language and Cultural Considerations in Neuropsychological Evaluations With Aviators
Farzin Irani, Lauren Drag, Mi-Yeoung Jo, and Delia Silva

Chapter 18 The Development and Deployment of Future Integrated Neuropsychological Support for Operations: The Case for and Definition of Real-Time Computational Human Performance
Lea Sophie Vink

Chapter 19 Cognitive Assessment of Astronauts
Mathias Basner, Gary Strangman, and Ruben C. Gur

Section IV: Investigation

Chapter 20 Air Accident Investigation With a Focus on Relevant Neuropsychological Factors
Robert Bor, Carina Eriksen, and Alpo Vuorio

Chapter 21 Cognitive Functioning and Piloting in the Context of Incidents and Trauma
Mark W. Wiggins and Monique Crane

Chapter 22 Advancing Aerospace Medicine: Integrating Data-Driven Approaches for Flight Safety and Pilot Well-Being
Ann Norris, Valerie Skaggs, and Thomas Chidester

Chapter 23 Toxic Fumes in Airplane Cabins: A Health and Flight Safety Risk?
Sarah Mackenzie Ross

Section V: Specialist Aspects of Aviation Neuropsychology

Chapter 24 Conditions Common in Aviation and Their Neuropsychological Implications
Lauren Drag

Chapter 25 Neurologic Conditions With Aeromedically Significant Cognitive Relevance
Roger R. Hesselbrock

Chapter 26 COVID-19: Initial and Chronic Neuropsychological Symptoms
Christopher F. Flynn

Chapter 27 Neurocognitive Functioning in People With HIV: Implications for Pilots and Air Traffic Controllers
Andrew Levine

Chapter 28 Attention-Deficit/Hyperactivity Disorder in Aviation Neuropsychology
Jason A. King and Daniel N. DaSilva

Chapter 29 Dreaming to Fly and the Neuropsychological Reality: Case Studies in ADHD and ASD
Alastair L. Gray

Chapter 30 Learning Disabilities in Aviation Neuropsychology
Daniel N. DaSilva and Jason A. King

Chapter 31 The Impact of Age on Cognitive Performance at Work: A Focus on Pilots and Air Traffic Controllers
Mickaël Causse, Damien Mouratille, Marc Baumgartner, and Jean-Paul Imbert

Chapter 32 Putting It Into Words: Neuropsychological Report Writing in Aviation
Alastair L. Gray

The editors

Robert Bor, DPhil CPsychol, is Director and cofounder of the Centre for Aviation Psychology. Professor Bor is a registered and practicing clinical, counseling, and health psychologist in the UK. He is also a certified aviation psychologist in Europe and a board member of the European Association for Aviation Psychology.

Carina Eriksen, MSc, Dip Psych, is a UK Health and Care Professions Council registered and British Psychological Society (BPS) chartered consultant psychologist with an extensive London-based private practice. She is a fellow of the BPS and a registered aviation psychologist.

Randy J. Georgemiller, PhD, ABPP, is a board-certified licensed clinical psychologist who is the recently retired Supervisory Psychologist for Aviation Psychology and Chief Neuropsychologist in the Office of Aerospace Medicine at the Federal Aviation Administration (FAA) headquarters.

Alastair L. Gray, BSc, PhD, delivers neuropsychological assessment and opinion for both private and commercial pilots in the UK as an accredited aviation psychologist through the European Association of Aviation Psychology and provides specialist neuropsychological evaluations for conditions ranging from stress and burnout to ADHD and autistic spectrum disorders.

The new edition of the original Narrative Exposure Therapy manual is full of new and valuable information on how to use this effective, short-term, culturally inclusive intervention with survivors of multiple and complex trauma

Extensive evidence shows that six to twelve sessions of Narrative Exposure Therapy (NET) can be sufficient to provide considerable relief from events such as organized violence, torture, war, rape, and childhood abuse. The new manual is even more clearly structured and easy-to-follow, and includes new figures that help illustrate and guide the reader through the steps of NET. The theoretical sections offer a solid basis for carrying out the therapeutic intervention. The reader is then shown the NET approach step by step, with robust and straightforward practical advice and tools, including how to deal with challenging situations, e.g., how to go deeper when faced with the challenging dynamics of remembering trauma, and how to manage dissociation, avoidance, strong emotions, lost memories, or the sudden emergence of unexpected recollections from the past. NET therapy conversations and resulting narrations from trauma scenes demonstrate the level of Narrative Exposure details required. Finally, the importance of reading back the testimony to the individual is explained.

A new section on the variations of NET details how to offer KIDNET for children and young people, FORNET for victims of trauma who are perpetrators of violence, NETfacts for communities, and ElderNET for older adults as well as online NET (eNET). Experienced therapists also get an idea of how NET is typically trained and how to facilitate NET exercises. Downloadable resources for use in clinical practice include handouts, examples of narrations, and a checklist for adverse life events.

This book is an invaluable resource for clinical psychologists, psychotherapists, psychiatrists, counselors, crisis workers, social workers, health workers, and physicians.

The authors

Maggie Schauer, PhD, is a psychotraumatologist at the University of Konstanz, Germany. Together with Frank Neuner and Thomas Elbert, she has developed Narrative Exposure Therapy (NET). Maggie is a founding member of the NGO vivo international, of the NGO babyforum (counteracting neglect and maltreatment in early childhood), and of NET The Institute. She has researched multiple and complex traumatization after family and organized violence, childhood trauma, torture, and human rights violations.

Frank Neuner, PhD, is Professor and Chair of Clinical Psychology and Psychotherapy at Bielefeld University, including the university's outpatient clinic. He has gained an international reputation for the co-development of NET. Frank published the first randomized treatment trial for posttraumatic stress disorder with refugees living in a war region, which was followed by a series of highly cited published randomized controlled trials of his working group.

Thomas Elbert, PhD, specializes in research on the consequences of social and traumatic stress. He has conducted laboratory and clinical studies as well as field studies and care projects directly in conflict areas. Moreover, his research team has asked what motivates people to perpetrate violence, whether domestic or in organized groups. Thomas is a member of the German Academy of Sciences Leopoldina, the Berlin-Brandenburg Academy of Sciences, and the Academia Europaea.
