A uniquely “human” textbook to prepare students for behavioral sciences examinations

The latest edition of this popular textbook on the behavioral and social sciences in medicine has been fully revised and updated to meet the latest teaching recommendations by the National Academy of Medicine (NAM). It is an invaluable resource for behavioral science foundation courses and exam preparation in the fields of medicine and health, including the USMLE Step 1. Its 23 chapters are divided into five core sections: mind–body interactions in health and disease, patient behavior, the physician’s role, physician–patient interactions, and social and cultural issues in health care.

Under the careful guidance and editing of Danny Wedding, PhD, Distinguished Consulting Faculty Member, Saybrook University, Oakland, CA, and Margaret L. Stuber, MD, Professor of Psychiatry and Biobehavioral Sciences at UCLA, nearly 40 leading educators from major medical faculties have contributed to produce this well-designed textbook.

The following unique features of *Behavior and Medicine* make it one of the most popular textbooks for teaching behavioral sciences:

- Based on the core topics recommended by the NAM
- Numerous case examples, tables, charts, and boxes for quick access to information
- Resources for students and instructors, including USMLE-style review Q & As
- Specific “Tips for the Step” in each chapter guide learning
- The use of works of art, poetry, and aphorisms “humanize” the material
- Comprehensive, trustworthy, and up-to-date
- Competitive price

“Targeted specifically for medical students with the goal of helping them pass the behavioral science section of the USMLE, this book is extraordinarily useful for all those interested in the interaction of behavior and medicine.”

Bradley R. Cutler, MD, Rush University Medical Center, in *Doody’s Book Reviews*

- How Doctors Die by *Ken Murray*
- USMLE Review Questions
- USMLE Review Answers

About the Editors

Danny Wedding, PhD, MPH, Saybrook University, Oakland, CA and University of the Caribbean, Cuycoy, Sint Maarten. Danny trained as a clinical psychologist and he has taught medical students and

psychiatry residents throughout his career. Danny retired from the University of Missouri School of Medicine, but he continues to write, lecture, and consult from his home in Berkeley, California.

Margaret L. Stuber, MD, Professor of Psychiatry and Biobehavioral Sciences at David Geffen School of Medicine at UCLA. Margi has worked in medical student education at the David Geffen School of Medicine at UCLA for almost 30

years and is the Associate Chair for Medical Student Education for the department of Psychiatry. Her newest adventure is serving as the Program Director for the UCLA/VA Greater Los Angeles Psychiatry Residency Program.

A global look at the current challenges and strategies in suicide prevention

Suicide is one of the most personal yet one of the most complex acts people can engage in. It continues to be a major global public health problem with an estimated 800,000 deaths annually. Suicide prevention is an important target in the United Nations Sustainable Development Goals (SDGs) for 2030, which aim to reduce premature mortality from noncommunicable diseases by one-third. Suicide is a global problem, but what differences are there in the challenges faced and the solutions found regionally?

Written by leading experts, the nine chapters of this volume provide a clear outline of the major milestones and achievements so far in six different geographical regions using the data collated by the Interna-

tional Association for Suicide Prevention (IASP) and the WHO Department of Mental Health and Substance Abuse, as well as information on the recent progress in the development and implementation of national suicide prevention programs in different countries. In two concluding chapters, the evidence base and best practice of suicide prevention programs are reviewed, as well as the future directions for suicide prevention at the global level.

This book is essential reading for all those involved in suicide research and prevention as well as public health policy and epidemiology who want to keep up-to-date with the latest global developments.

£ 27.90

With estimated replication rates ranging between 25% for social psychology and 50% for cognitive psychology, it has become clear that psychology suffers from a severe replicability problem. The open science movement strives to improve the way psychologists conduct, analyze, and publish studies through the use of open data and materials, registered reports, and research transparency.

This collection of articles highlights recent developments within open science in psychology, beginning with an introductory article

addressing the current state of the debate in which seven major facets of methodological reforms are outlined. Two contributions explore the progress made and problems encountered in developing and refining methods for detecting publication biases, questionable research practices, and *p*-hacking. Two further articles exploring the development of the causal replication framework as a design tool for research replication and the results of the first long-term *N*-pact factor analysis as an indicator of journal quality complete this collection.

Thought-provoking contributions from the world of the Rorschach, including a special section on the use of projective methods with couples and families.

Rorschachiana is the official publication of the International Society for the Rorschach and Projective Methods, now with more than 3,000 members throughout the world, which for over half a century has played an important role in supporting the use of the instrument, as well as helping to develop extensive empirical research on its effectiveness in specific clinical situations.

Rorschachiana is also available as a journal (ISSN 1192-5604). The journal subscription includes 2 online issues per year, access to available back issues, and the book as an annual print compendium.
