|                          |  |            |
|--------------------------|--|------------|
| <b>Editorial</b>         | Educational Neuroscience: A Field Between False Hopes and Realistic Expectations<br><i>Elsbeth Stern, Roland H. Grabner, and Ralph Schumacher</i>  | <b>237</b> |
| <b>Review Articles</b>   | Development of Reading Remediation for Dyslexic Individuals: Added Benefits of the Joint Consideration of Neurophysiological and Behavioral Data<br><i>Mélanie Bédard, Line Laplante, and Julien Mercier</i>                   | <b>240</b> |
|                          | A Systematic Review of the Literature Linking Neural Correlates of Feedback Processing to Learning<br><i>Jan-Sébastien Dion and Gérardo Restrepo</i>   | <b>247</b> |
| <b>Original Articles</b> | The Effect of a Prospected Reward on Semantic Processing: An N400 EEG Study<br><i>Sanne H. G. van der Ven, Sven A. C. van Touw, Anne H. van Hoogmoed, Eva M. Janssen, and Paul P. M. Leseman</i>                               | <b>257</b> |
|                          | Proportional Reasoning: The Role of Congruity and Salience in Behavioral and Imaging Research<br><i>Ruth Stavy, Reuven Babai, and Arava Y. Kallai</i>  | <b>266</b> |
|                          | The Learning Brain: Neuronal Recycling and Inhibition<br><i>Emmanuel Ahr, Grégoire Borst, and Olivier Houdé</i>  | <b>277</b> |
| <b>Spotlights</b>        | Event-Related Potentials (ERPs) Reflecting Feedback and Error Processing in the Context of Education<br><i>Frieder L. Schillinger</i>  | <b>286</b> |
|                          | Neuroscience-Based Approaches to Teaching Students on the Autism Spectrum<br><i>Debbie Cockerham and Evie Malaia</i>   | <b>290</b> |
|                          | Measuring Implicit Cognitive and Emotional Engagement to Better Understand Learners' Performance in Problem Solving<br><i>Patrick Charland, Pierre-Majorique Léger, Julien Mercier, Yannick Skelling, and Hugo G. Lapierre</i> | <b>294</b> |
|                          | Behavioral and Neural Effects of Game-Based Learning on Improving Computational Fluency With Numbers: An Optical Brain Imaging Study<br><i>Murat Perit Çakır, Nur Akkuş Çakır, Hasan Ayaz, and Frank J. Lee</i>                | <b>297</b> |
| <b>Opinions</b>          | Dyslexia Intervention – What Can We Learn From Neuroscience? Commentary on Bédard, Laplante, and Mercier (2016)<br><i>Karin Landerl and Chiara Banfi</i>   | <b>303</b> |

|                           |   |            |
|---------------------------|---|------------|
|                           | What are the Benefits and Potential Problems of Jointly Considering Neurophysiological and Behavioral Data in Dyslexia Intervention Research? Commentary on Bédard, Laplante, and Mercier (2016)<br><i>Wolfgang Schneider</i> | <b>305</b> |
|                           | Learning in Development and Education – A Mechanistic Understanding Is Needed: Commentary on Dion and Restrepo (2016)<br><i>Tobias U. Hauser</i>  | <b>307</b> |
|                           | What Does Brain Activation Tell Us About Numerical Congruity and Salience? Commentary on Stavy, Babai, and Kallai (2016)<br><i>Andreas Obersteiner</i>  | <b>309</b> |
|                           | The Origin and Functional Organization of Cortical Areas Involved in Reading: Commentary on Ahr, Borst, and Houdé (2016)<br><i>Daniel Kiper</i>   | <b>311</b> |
|                           | The Long and Winding Road to Educationally Relevant Cognitive Neuroscience: Commentary on Çakır, Akkus Çakır, Ayaz, and Lee (2016)<br><i>Lieven Verschaffel</i>   | <b>312</b> |
| <b>Erratum</b>            | Correction to Lazarević et al. (2016)   | <b>313</b> |
| <b>Call for Papers</b>    | “Theory of Mind Across the Lifespan”: A Topical Issue of the <i>Zeitschrift für Psychologie</i><br>Guest Editor: <i>Daniel M. Bernstein</i>   | <b>314</b> |
| <b>Volume Information</b> | Reviewers 2016  | <b>315</b> |
